

You gonna search the WiFis in your Mobile phone for a WiFi with SSID: Ex. 'Jugs_811545174'

Connect through any browser with the URL: <http://192.168.4.1>

IE NODE

INFO

NAME: Jugs
ID: 811545174
FIRMWARE VERSION: MT
REASON: Zero Address

ADDRESS SELECTION

ENABLE SOFTADDRESS

HARDWARE ADDRESS

0

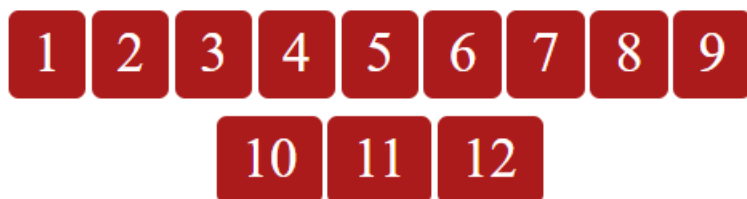

MODULES DETECTED

IO(0) IO(3)

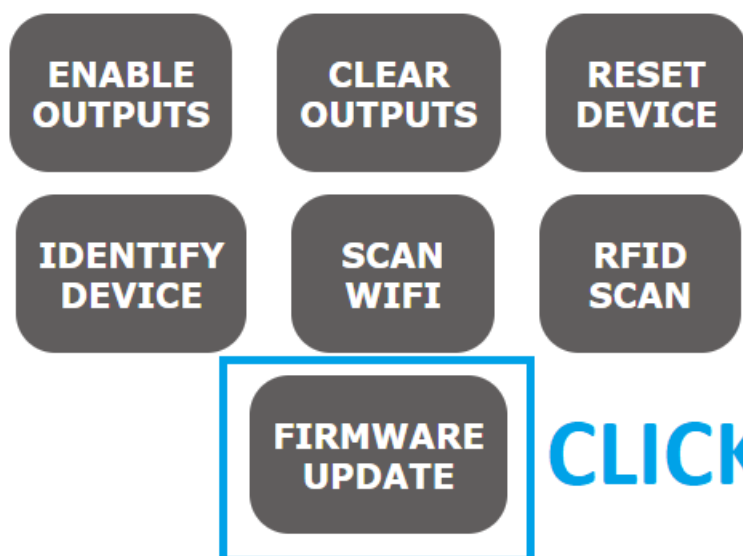

Webpage will popup to your phone. (We must ignore it for ther **Firmware Update** proccess, the reason is that through portal we won't get rights to **Choose a File**). So we pickup any browser from mobile phone and hit directly the URL: **http://192.168.4.1**

That way we bring up the Webpage of Node again , and **we have the rights to Choose a File**
